

Oleksandr Burdun - System Architect Resume

Summary

System architect operating at the boundary of product goals, engineering realities, and delivery constraints. Repeatedly brought complex systems to clarity: from greenfield-to-production to refactoring legacy codepaths into configurable, backend-driven architectures that teams can evolve safely.

Multi-team architectural reach across large game titles and supporting platforms. Highlights include transforming a client-bound monetization system into a controlled, backend-driven capability; proving microservices/containerization patterns that later influenced company-wide standards; and unblocking a stalled, multi-department legacy-title reskin to a global launch under tight timelines.

Hands-on with reviews, design decisions, refactoring direction, and CI/CD pragmatics when they support the architecture. Comfortable aligning client, backend, tools, and LiveOps workflows; mentoring engineers and local tech leads on system thinking and long-term maintainability.

Continuously builds and evaluates tooling and AI-native workflows (RAG, multi-agent patterns, MCP) to keep architectural decisions grounded in current implementation reality.

Experience

Independent - Remote

2019 - Present · Personal R&D alongside full-time leadership roles

Independent Software Architect / Product Builder 2019 - Present

- Built Book Pipeline: an AI-assisted publishing workflow using embeddings, vector search, RAG, and multi-agent review pipelines.
- Created a reusable Markdown-to-Telegram publishing platform (REST API) for rich-text/media publishing, shared across multiple apps.
- Designed and operated self-hosted, containerized infrastructure with CI/CD, monitoring, backups, and deployment automation for personal products.
- Prototyped AI-native engineering workflows with LLMs, agent orchestration, MCP-compatible services, retrieval pipelines, and developer automation.
- Built JiveMax: a modernization of the piCorePlayer embedded UI (inspired by Logitech JiveLite), with responsive layouts and automated cross-platform builds (Docker, GitHub Actions); low-level multi-arch C/C++/Lua.
- Skills: Go; TypeScript; Python; Docker; PostgreSQL/pgvector; Qdrant; Redis; Kafka; GitHub Actions; OpenAI API; Claude / Cursor / Codex; MCP; Multi-Agent Systems / RAG; C / C++ / Lua

Playtika - Kyiv, Kyiv City, Ukraine (Hybrid)

Full-time · 2 yrs 5 mos

Group Manager Mar 2025 - Jan 2026 · 11 mos

- Took ownership of a multi-department, unowned POC effort; audited delivery, re-scoped, and drove a feature-cut reskin of a large 2012-era title to global launch in 5 months.
- Led a 12-person cross-functional team from technical setup and design adaptation through live-ops readiness.
- Implemented a new tutorial framework from scratch to improve onboarding metrics and content flexibility.
- Automated codebase synchronization between the project and the parent repository; parts of the solution were later folded into the broader engineering pipeline.
- Contributed (not owner) to a cross-team AI initiative for dynamic content generation, aligning production workflows with generative tooling.
- Coordinated with art, QA, analytics, and LiveOps to maintain velocity and quality under tight deadlines; handed off to standard org structure post-launch.
- Skills: TypeScript; Java; TeamCity; Team Leadership; AI-Assisted Development; Delivery Ownership / Turnaround

Technical Lead Sep 2023 - Mar 2025 · 1 yr 7 mos

- Served as local architect for a large Match-3 title, mentoring/consulting 10+ engineers across multiple feature teams; owned system design, code quality, and maintainability.
- Refactored the entire monetization system from hardcoded client JSON to a configurable, backend-driven solution with version control, controlled rollouts, rollback support, and dynamic economy updates via a custom back-office-enabling dozens of safe iterations per day instead of infrequent client-bound changes.
- Drove multiple complex feature launches while aligning Unity client code and backend microservices.
- Acted as one of several internal advocates for AI-assisted tooling adoption within team workflows.
- Improved TeamCity pipelines for faster build validation and deployment cycles.
- Skills: Unity; Java; Jenkins; TeamCity; AI-Assisted Development

Project Ukraine - Kyiv, Kyiv City, Ukraine (Remote)

Senior Software Engineer Apr 2022 - Jul 2023 · 1 yr 4 mos

- Owned architecture and technical foundation for an iOS-only platformer/metroidvania built in Unity.
- Designed a decoupled character system (MVC-style) separating movement math from visuals; built an extensible state machine enabling new logical/animated states without cross-cutting changes.
- Shipped an original visualization system: an infinite, explorable knowledge graph rendered and interacted with entirely in VFX Graph.
- Delivered gameplay tooling for physics, effects, and particles used by the wider design team; implemented several Burst-based performance features.
- Set up CI/CD with Unity Cloud, Bash, and GitHub Actions.
- Skills: Unity; iOS Development; Software Architecture; MVC / State Machine Design; Visual Effects; Particle Effects; Continuous Integration and Continuous Delivery (CI/CD)

Funzy Games - Kyiv, Kyiv City, Ukraine

Senior Software Engineer Aug 2021 - Apr 2022 · 9 mos

- Implemented new gameplay behaviors for a bubble shooter; refactored several complex bubble types.
- Participated in (did not own) a targeted refactor of the bubble system to resolve race conditions and performance issues-adopting CancellationTokens and a more SOLID, component-based flow.
- Contributed to broader architecture improvements as part of a wider team effort.
- Skills: Unity; iOS Development; Android Development; Software Architecture; Concurrency / Race-Condition Debugging; Continuous Integration and Continuous Delivery (CI/CD)

Playtika - Kyiv

6 years 2 months

Development Team Lead Feb 2017 - Aug 2019 · 2 yrs 7 mos

- Organized the front-end development department in the Kyiv office from scratch-grew from a single developer to roughly 50 people across multiple cross-functional, self-managed agile teams.
- Built an onboarding/knowledge distribution model that cut ramp-up to 2-3 days (vs. 3-8 weeks elsewhere), enabling scale without proportional management overhead.
- Skills: Xamarin; .NET; C#; Java; CI/CD; Native Android Development; Native iOS Development; Org Design / Knowledge-Sharing Systems

Project Team Lead May 2015 - Feb 2017 · 1 yr 10 mos

- Led Dice Legends from scratch to Android launch with a 5-person team in 8 months; reached Top-5 in category shortly after release.
- Tested and proved a microservices approach using Docker containers on this project-results kicked off a broader scaling effort across the company that, years later (~4,000 employees), became part of Playtika's standard architecture.

- Skills: Unity 3D; .NET; C#; Java; CI/CD; Native Android Development; Native iOS Development; Microservices / Docker

Senior Software Engineer Jul 2013 - May 2015 · 1 yr 11 mos

- Contributed to the launch of a Video Poker plugin inside Caesars Casino.
- Acted at times as a client-side CTO assistant for rapid prototyping-delivered 3-5 one-day prototypes that de-risked logic modules/frameworks and rendering optimizations (including CPU-to-GPU shifts).
- Independently built and launched Farkle Pro on Facebook and three Russian social networks.
- Skills: AS3; PHP/HTML/JS/CSS; Java; CI/CD (Ant, Maven, TeamCity, etc.); Rapid Prototyping / Technical De-Risking; Rendering Optimization

Early Career

- Go Games Ltd - Senior Software Engineer (May 2012 - Jun 2013, Kyiv): Core features on a live title; tech lead on a ~3-person project; contributor on a ~10-person project; pivoted to Playtika as the company shifted direction. Skills: AS3; C#/ASP.NET; MSSQL; MongoDB; Photoshop; Flash Editor Scripting; Tech Leadership (small team)
- Addicted - Software Engineer (Aug 2011 - May 2012, Ryazan): Built two city-builder social games across Facebook/VK/Odnoklassniki within a 4-person team. Skills: AS3; Python; SQL; MongoDB; Redis; Debian (Ubuntu) Administration
- Freelance - Technical Project Coordinator / Developer (Nov 2008 - 2012, Kyiv): Full-stack delivery and coordination (sourcing projects, assembling teams, client comms). Skills: AS3; PHP/HTML/JS/CSS
- New Project - Project Manager (Nov 2007 - Nov 2008, Kyiv): Led ERP implementation; formalized processes with IDEF0/IDEF3; built a custom 1C UTP configuration and trained end users. Skills: Project Management; ERP Implementation; Business Process Modeling (IDEF0, IDEF3); 1C:Enterprise (UTP)
- ExpertSoft - Consultant / Project Manager / Sales Manager (Aug 2006 - Nov 2007, Kyiv): Delivery and sales of 1C UTP-based systems for auto parts/service operations; led a service station management implementation for the official Mazda dealer. Skills: ERP / Business Systems; Automotive Retail & Service; 1C:Enterprise (UTP); Project Management; Sales

Skills

- Architecture & Systems
 - Software Architecture; Microservices / Docker; MVC / State Machine Design; Org Design / Knowledge-Sharing Systems; Delivery Ownership / Turnaround; Rapid Prototyping / Technical De-Risking
- Platforms, Engines & Tooling
 - Unity; TeamCity; Jenkins; GitHub Actions; Docker
- Programming Languages
 - Go; TypeScript; Python; C#; Java; C / C++; Lua; AS3; PHP/HTML/JS/CSS; Bash
- Data & Infrastructure
 - PostgreSQL/pgvector; Qdrant; Redis; Kafka
- AI & Developer Workflows
 - AI-Assisted Development; Multi-Agent Systems; RAG; MCP; OpenAI API; Claude / Cursor / Codex
- Mobile & Client
 - Native Android Development; Native iOS Development; iOS Development; Visual Effects; Particle Effects
- Process & Business Systems
 - CI/CD; Project Management; ERP Implementation; Business Process Modeling (IDEF0, IDEF3); 1C:Enterprise (UTP)
